**DESCRIPTION**
The Delta-3 DTKP Keypad is one of Linear's series of wireless radio controls designed for use with automatic garage door and gate operators. The Delta-3 radio format provides 256 different codes. In operation, the user enters their unique code on the unit’s keypad and presses the START/STOP button to activate the door operator. For up to 30 seconds after the last activation, the DTKP can be re-triggered by simply pressing the START/STOP button again. This allows the user to stop or reverse the opener quickly, without having to re-enter their code.

The DTKP has built-in keypad lighting for use at night or in dark areas. By pressing the START/STOP button first, before entering their code (or pressing START/STOP twice at any time), the user can light up the keypad. The clear silicone keys are backlit with a pleasing green glow.

Standard Digital receivers are programmed by setting an 8-position dipswitch in the receiver. The DTKP will match the receiver’s code when the “ON” positions of the keypad switch are in descending order. Keys 0 and 9 are not used on the DTKP. A keypad lockout timer will disable the keypad after 3 code entry attempts. The keypad must remain idle for 30 seconds before new attempts can be made.

** INFO 1A Opening battery compartment. **
The DTKP battery should last up to 5 years with normal use. To replace the battery, remove the battery door retaining screws and slide the battery door off.

** INFO 1B Replacing battery. **
Remove the low battery and replace it with a fresh 9-volt alkaline or lithium battery. Replace the battery door and retaining screws.

** LIMITED WARRANTY **
This product is warranted to the consumer against defects in material and workmanship for one year from the date of purchase. The warranty applies only to new devices. Neither warranty will repair, or at its option, replace, any device if it fails to respond to the user’s commands. The remedies provided by this warranty are exclusive. This warranty provides limited protection against defects in materials and workmanship. It does not cover damage or defects caused by misuse, abuse, or unauthorized modifications. The warranty does not extend to damage or defects caused by shipping or handling costs. The warranty is void if the serial number is missing, altered, or tampered with. Devices do not come with instructions on how to operate or troubleshoot the device. The warranty is void if the serial number is missing, altered, or tampered with. Devices are not intended for use as a medical device. The warranty is void if the serial number is missing, altered, or tampered with. Devices are not intended for use as a medical device. The warranty is void if the serial number is missing, altered, or tampered with. Devices are not intended for use as a medical device.

** IMPORTANT !!! **
Linear radio controls provide a reliable communications link and fit as important next to portable wireless signaling. However, there are some limitations which must be observed.

For U.S. installations only: The radios are required to comply with FCC Rules and Regulations as Part 15 devices. As such, they have limited transmitter power and therefore limited range. A receiver cannot respond to more than one transmitted signal at a time and may be blocked by radio signals that occur on or near their operating frequencies, regardless of code settings.

Changes or modifications to the device may void FCC compliance. Devices should be repaired regularly to protect against undetected interference or fault. A general knowledge of radio and its vagaries should be gained prior to installation. Devices should be repaired regularly to protect against undetected interference or fault.

A receiver cannot respond to more than one transmitted signal at a time and may be blocked by radio signals that occur on or near their operating frequencies, regardless of code settings.
